Batten

User Manual

Order codes: EQLED058

WARNING

FOR YOUR OWN SAFETY, PLEASE READ THIS USER MANUAL CAREFULLY BEFORE YOUR INITIAL START-UP!

- Before your initial start-up, please make sure that there is no damage caused during transportation.
- Should there be any damage, consult your dealer and do not use the equipment.
- To maintain the equipment in good working condition and to ensure safe operation, it is necessary for the user to follow the safety instructions and warning notes written in this manual.
- Please note that damages caused by user modifications to this equipment are not subject to warranty.

IMPORTANT:

The manufacturer will not accept liability for any resulting damages caused by the non-observance of this manual or any unauthorised modification to the equipment.

- Never let the power cable come into contact with other cables. Handle the power cable and all mains voltage connections with particular caution!
- Never remove warning or informative labels from the unit.
- Do not open the equipment and do not modify the unit.
- Do not connect this equipment to a dimmer pack.
- Do not switch the equipment on and off in short intervals, as this will reduce the system's life.
- Only use the equipment indoors.
- Do not expose to flammable sources, liquids or gases.
- Always disconnect the power from the mains when equipment is not in use or before cleaning! Only handle the power-cable by the plug. Never pull out the plug by pulling the power-cable.
- Make sure that the available mains supply voltage is between 100~240V AC, 50/60Hz.
- Make sure that the power cable is never crimped or damaged. Check the equipment and the power cable periodically.
- If the equipment is dropped or damaged, disconnect the mains power supply immediately and have a qualified engineer inspect the equipment before operating again.
- If the equipment has been exposed to drastic temperature fluctuation (e.g. after transportation), do not connect power or switch it on immediately. The arising condensation might damage the equipment. Leave the equipment switched off until it has reached room temperature.
- If your product fails to function correctly, stop use immediately. Pack the unit securely (preferably in the original packing material), and return it to your Pro Light dealer for service.
- Only use fuses of same type and rating.
- Repairs, servicing and power connection must only be carried out by a qualified technician. THIS UNIT CONTAINS NO USER SERVICEABLE PARTS.
- This lighting fixture is for professional use only - it is not designed for or suitable for household use. The product must be installed by a qualified technician in accordance with local territory regulations. The safety of the installation is the responsibility of the installer. The fixture presents risks of severe injury or death due to fire hazards, electric shock and falls.
- Warning! Risk Group 2 LED product according to EN 62471. Do not view the light output with optical instruments or any device that may concentrate the beam.
- WARRANTY: One year from date of purchase.

OPERATING DETERMINATIONS

If this equipment is operated in any other way, than those described in this manual, the product may suffer damage and the warranty becomes void. Incorrect operation may lead to danger e.g: short-circuit, burns and electric shocks etc.

Do not endanger your own safety and the safety of others!

Incorrect installation or use can cause serious damage to people and/or property.

Please note: These fixtures are intended for stage lighting and entertainment applications only, and are not intended for extended periods of use, including but not limited to house-light, industrial or architectural applications and should only be operated with short duty cycles.

SpectraPix Lithium Batten

The SpectraPix Lithium Batten contains 224 SMD 5050 RGB LEDs divided into 16 segments. They feature a wide 120° viewing angle and feature a milky, frost effect front screen along with clear front screen to further expand the versatility of this fixture. The internal lithium battery has autonomy of up to 7.5 hours in single colour mode and up to 16 hours of colour fading and chases, while the charging time is only 4 hours. Onboard features include colour mixing to create soft washes from its rich colour palette, and chase programs controlled in auto mode or activated by music. The IR remote and on-board wireless DMX receiver makes for a truly cable free operation and is W-DMX compatible.

- 224 tri-colour SMD 5050 LEDs (RGB)
- Viewing angle: 120°
- 10kHz refresh rate
- DMX channels: 3/3/5/24/48 or 53 selectable
- Wireless control (W-DMX Sweden compatible transceiver)
- Static colour, auto, sound active and master/slave mode when cabled plus built-in programs
- 0-100% dimming
- Variable strobe
- Bracket allows for multiple rigging or floor standing applications
- 4 push button menu with LED display
- Rechargeable battery for wireless applications
- Maximum run time: up to 7.5 hours (single colour), 16 hours (colour change/fade), 3 hours 45 mins (full on)
- Charging time: 4 hours (max.)
- IEC power input/output
- 3-Pin XLR input/output
- Convection cooled
- Supplied with IR remote

Specifications	
Power consumption	56W
Power supply	110~240V, 50/60Hz
Fuse	F3A 250V
Battery	24V 5800mAh
Battery Fuse	F3A 250V
Dimensions	90 x 1043 x 60mm
Weight	2.4kg
Order code	EQLED058

01 - Bracket tightening knobs
 02 - Bracket
 03 - IEC power input
 04 - Fuse F3A 250V
 05 - Earth point
 06 - Power switch

07 - 3-Pin XLR input
 08 - 3-Pin XLR output
 09 - Wireless DMX indicator
 10 - Wireless DMX pair button
 11 - Microphone
 12 - Function buttons

13 - LED display
 14 - Battery charging indicator
 15 - IR sensor
 16 - Charging indicator
 17 - Battery fuse F3A 250V
 18 - IEC power output

In the box:
1 x fixture with frosted front screen,
1 x clear front screen,
2 x knobs,
2 x mounting brackets/feet,
& 1 x power cable

DMX mode:

To access the DMX address mode, press the “MENU” button to show *Addr* on the LED display. Press the “ENTER” button and use the “UP” and “DOWN” buttons to set the required DMX address. Press the “ENTER” button to confirm the setting. Now use the “UP” and “DOWN” buttons to choose one of the 3/3/5/24/48 or 53 DMX channel modes. Press the “ENTER” button to confirm the setting. To exit out of any of the above options, press the “MENU” button.

Wireless DMX

1. Press and hold the Wireless DMX button with the batten turned off. Turn the batten on and continue to hold the Wireless DMX button for 3 seconds. Release the button and press to switch between green (receive) or blue (transmit). For this purpose you require it to be green.
2. Turn the batten off and power back on.
3. Set the batten into DMX mode by pressing the “MENU” button until the display shows *Addr* . Press the “ENTER” button.
4. Press the pair button on the Wireless Transmitter/Wireless Controller.
5. The Wireless DMX indicator on the batten will flash green, followed by red and then turn static green, this indicates the batten is paired. You can now control the batten wirelessly via DMX.

Please note: there is no wired DMX pass thru.

Wireless Reset

1. To reset the wireless ensure the batten is turned on. Press and hold the Wireless DMX indicator for 3 seconds.
2. The LED indicator will flash blue, when it starts this release the button and the LED indicator will turn white. This indicates the Wireless memory has been cleared.

3 channel mode 1:

250-255	White (RGB)

Auto mode:

To access auto mode, press the “MENU” button to show *AUTO* on the LED display. Now press the “ENTER” button, the Auto mode will now run. Press the “ENTER” button to confirm the setting.

Show modes (built-in programs):

To access the show modes (built-in programs), press the “MENU” button to show *Show* on the LED display. Now press the “ENTER” button and use the “UP” and “DOWN” buttons to choose the required program *Sh 1 ~ Sh 54*. Press the “ENTER” button and use the “UP” and “DOWN” buttons to select the speed between *SP 1 ~ SP 10*. Press the “ENTER” button to confirm the setting and use the “UP” and “DOWN” buttons to select the flash speed between *St 0 ~ St 9*.

Press the “ENTER” button to confirm the setting.

To exit out of any of the above options, press the “MENU” button.

Sound modes:

To access the sound modes (built-in programs), press the “MENU” button to show *Sound* on the LED display. Now press the “ENTER” button and use the “UP” and “DOWN” buttons to choose the required sound mode *Sou 1 ~ Sou 3*. Press the “ENTER” button and use the “UP” and “DOWN” buttons to select the sound sensitivity between *SEn 1 ~ SEn 9*.

Press the “ENTER” button to confirm the setting.

To exit out of any of the above options, press the “MENU” button.

Master/slave mode:

The default setting for this fixture is master. To set the master unit, select from one of the auto, show, sound, colour mix or static colour modes.

To set the slave unit, press the “MENU” button to show *SLAVE* on the LED display.

The unit is now in slave mode. To exit out of any of the above options, press the “MENU” button.

Please ensure that all slave units are set to the same DMX channel mode as the master unit.

Wireless Master/Slave

1. Press and hold the Wireless DMX button with the batten turned off. Turn the batten on and continue to hold the Wireless DMX button for 3 seconds. Release the button and press to switch between green (receive) or blue (transmit). For this purpose you require one batten (the master) to be set to blue (transmit) and the remaining battens (slaves) to be set to green (receive).
2. Turn the battens off and power back on.
3. Set the master batten into the desired show, auto or sound mode by pressing the “MENU” button until the display shows *Show, Auto* or *Sound*. Press the “ENTER” button.
4. Set the slave batten(s) into the slave mode by pressing the “MENU” button until the display shows *SLAVE*. Press the “ENTER” button.
5. Press the Wireless DMX button on master batten.
6. The Wireless DMX indicator on the master batten will flash blue whilst the indicators on the slave batten(s) will flash green. These will turn static indicating they have paired. The slave batten(s) will now follow the master batten.

Wireless Reset

1. To reset the wireless ensure the batten is turned on. Press and hold the Wireless DMX indicator for 3 seconds.
2. The LED indicator will flash blue, when it starts this release the button and the LED indicator will turn white. This indicates the Wireless memory has been cleared.

Colour mix mode:

To access the static colour mode press “MENU” until **COL** shows on the LED display.

Now press the “ENTER” button and use the “UP” and “DOWN” buttons to select the brightness between **000 ~ 255**. Press the “ENTER” button and repeat for green (**g**) and blue (**b**).

Value: 000 - 255 (000 = low brightness, 255 = high brightness) To select a strobe speed Press the “ENTER” button to confirm the setting and use the “UP” and “DOWN” buttons to select the flash speed between **5t 0 ~ 5t 9**.

PLEASE NOTE: CHANGING THE STROBE WILL AFFECT THE STATIC COLOUR MODE.

To exit out of any of the above options, press the “MENU” button.

Static colour mode:

To access the static colour mode, press the “MENU” button to show **5t A t** on the LED display.

Now press the “ENTER” button and use the “UP” and “DOWN” buttons to choose the required colour between **CL01 ~ CL26**. Press the “ENTER” button to confirm the setting.

To exit out of any of the above options, press the “MENU” button.

Value	Colour
CL01	Blackout
CL02	Red
CL03	Dark Orange
CL04	Orange
CL05	Amber
CL06	Yellow
CL07	Yellow Green
CL08	Lime Green

Value	Colour
CL08	Lime Green
CL09	Medium Green
CL10	Green
CL11	Vibrant Green
CL12	Mint Green
CL13	Turquoise
CL14	Cyan
CL15	Light Blue

Value	Colour
CL16	Medium Blue
CL17	Congo Blue
CL18	Blue
CL19	Purple Blue
CL20	Purple
CL21	Violet
CL22	Pink
CL23	Magenta

Value	Colour
CL24	Hot Pink
CL25	Fuchsia
CL26	White (RGB)

Display backlight setting:

To access the display backlight setting, press the “MENU” button to show **5t B t** on the LED display. Now press the “ENTER” button and use the “UP” and “DOWN” buttons to select **d! 5**. Press the “ENTER” button and use the “UP” and “DOWN” buttons to select between **10 5** (10 seconds), **20 5** (20 seconds), **30 5** (30 seconds), **60 5** (60 seconds) or **on** (constantly on).

Press the “ENTER” button to confirm the setting.

To exit out of any of the above options, press the “MENU” button.

Program direction setting:

To access the program direction setting, press the “MENU” button to show *SPE* on the LED display.

Now press the “ENTER” button and use the “UP” and “DOWN” buttons to select *dir*. Press the

“ENTER” button and use the “UP” and “DOWN” buttons to select between *E---* or *---E*.

Press the “ENTER” button to confirm the setting.

To exit out of any of the above options, press the “MENU” button.

Infrared setting:

To access the infrared setting, press the “MENU” button to show *SPE* on the LED display. Now press the “ENTER” button and use the “UP” and “DOWN” buttons to select *InfR*. Press the “ENTER” button

and use the “UP” and “DOWN” buttons to select *YES* or *no*.

Software version:

To view the fixtures software version, press the “MENU” button to show *InfR* on the LED display.

Now press the “ENTER” button to show *ver*, press the “ENTER” button again and the software version will be displayed. To exit out of any of the above options, press the “MENU” button.

Please ensure that all slave units are set to the same DMX channel mode as the master unit.

Fixture temperature:

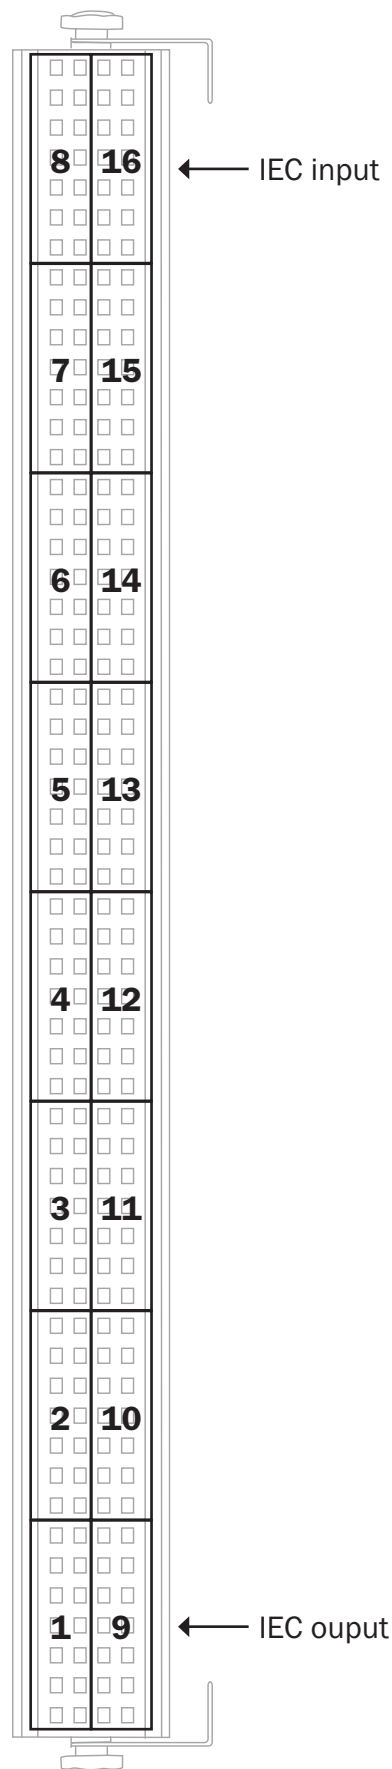

To access the fixture temperature press the “MENU” button to show *InfR* on the LED display. Now press the “ENTER” button and use the “UP” and “DOWN” buttons to select *temp*. Press the “ENTER” button to display the temperature.

IR remote functions (if applicable):

Button Functions:

- 1 - Blackout ON/OFF
- 2 - Up and down buttons
- 3 - Press once to set the unit into auto mode, press a second time to enter the show modes, then use the up and down buttons to select the show required (Show mode speed must be set via the menu on the batten)
- 4 - Press once to set the unit into fade mode
- 5 - Press once to enable strobe, then use the up and down buttons to select the strobe speed, press again to disable strobe
- 6 - Press once to set the unit into sound mode, then use the up and down buttons to select the sound mode required (Sound sensitivity must be set via the menu on the batten)
- 7 - Press once to set the unit into slave mode
- 8 - Press once to set the unit to full on, the up and down buttons can then be used to scroll through the static colour options
- 9 - Press the colour required once, the up and down buttons can then be used to scroll through the static colour options
- 10 - Press the address button once, then use the up and down buttons to select the DMX address required
- 11 - Press the channel button once, then use the up and down buttons to select between 3/3/5/24/48 or 53 channel modes

Setting the DMX address:

The DMX mode enables the use of a universal DMX controller. Each fixture requires a “start address” from 1- 512. A fixture requiring one or more channels for control begins to read the data on the channel indicated by the start address. For example, a fixture that occupies or uses 7 channels of DMX and was addressed to start on DMX channel 100, would read data from channels: 100, 101, 102, 103, 104, 105 and 106. Choose a start address so that the channels used do not overlap. E.g. the next unit in the chain starts at 107.

DMX 512:

DMX (Digital Multiplex) is a universal protocol used as a form of communication between intelligent fixtures and controllers. A DMX controller sends DMX data instructions from the controller to the fixture. DMX data is sent as serial data that travels from fixture to fixture via the DATA “IN” and DATA “OUT” XLR terminals located on all DMX fixtures (most controllers only have a data “out” terminal).

DMX linking:

DMX is a language allowing all makes and models of different manufactures to be linked together and operate from a single controller, as long as all fixtures and the controller are DMX compliant. To ensure proper DMX data transmission, when using several DMX fixtures try to use the shortest cable path possible. The order in which fixtures are connected in a DMX line does not influence the DMX addressing. For example; a fixture assigned to a DMX address of 1 may be placed anywhere in a DMX line, at the beginning, at the end, or anywhere in the middle. When a fixture is assigned a DMX address of 1, the DMX controller knows to send DATA assigned to address 1 to that unit, no matter where it is located in the DMX chain.

DATA cable (DMX cable) requirements (for DMX operation):

This fixture can be controlled via DMX-512 protocol. The DMX address is set on the back of the unit. Your unit requires either a standard 3-pin or 5-pin XLR connector for data input/output, see images below.

Further DMX cables can be purchased from all good sound and lighting suppliers or Prolight Concepts dealers.

Please quote:	3-Pin:	CABL10 – 2m	CABL11 – 5m	CABL12 – 10m
	5-Pin:	CABL185 – 2m	CABL187 – 5m	CABL188 – 10m

Also remember that DMX cable must be daisy chained and cannot be split.

Notice:

Be sure to follow the diagrams below when making your own cables. Do not connect the cables shield conductor to the ground lug or allow the shield conductor to come in contact with the XLRs outer casing. Grounding the shield could cause a short circuit and erratic behaviour.

Pin Configuration	
3-Pin	5-Pin
	Pin 1 - Ground
	Pin 2 - Negative
	Pin 3 - Positive
-	Pin 4 - N/C
-	Pin 5 - N/C

Line termination:

When longer runs of cable are used, you may need to use a terminator on the last unit to avoid erratic behaviour.

Using a cable terminator will decrease the possibilities of erratic behaviour.

(3-pin - Order ref: CABL90,
5-pin - Order ref: CABL89)

5-pin XLR DMX connectors:

Some manufactures use 5-pin XLR connectors for data transmission in place of 3-pin. 5-pin XLR fixtures may be implemented in a 3-pin XLR DMX line. When inserting standard 5-pin XLR connectors in to a 3-pin line a cable adaptor must be used. The diagram below details the correct cable conversion.

Power linking:

This fixture provides power linking via the power output on the rear allowing multiple units to be connected together. The maximum number of fixtures that can be connected is 24 fixtures @ 240V or 12 fixtures @ 120V (including the first fixture). After the maximum number of fixtures are connected a new power run will need to be started.

Please note: Caution should be used when power linking other fixtures to the SpectraPix Batten as the power consumption of other fixtures will vary. Fixtures fitted with lamps often require 2/3 times more current on startup, these may require their own power source.

Correct Disposal of this Product (Waste Electrical & Electronic Equipment)

(Applicable in the European Union and other European countries with separate collection systems)

This marking shown on the product or its literature, indicates that it should not be disposed of with other household wastes at the end of its working life. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take this item for environmentally safe recycling.

Business users should contact their supplier and check the terms and conditions of the purchase contract. This product should not be mixed with other commercial wastes for disposal.
