FREEDOM (FOLDABLE) FLOOR RACK

Have you already gotten your hands on our down rigger system? Then you are one step away from using it as a lighting tower. You simply turn a down rigger upside down, slide it into our aluminium base and your floor rack is born. You can use it as a sidelight tower, moving head tower or floor stand.

KEY FEATURES FREEDOM SYSTEM

Versatile modular system

The modular nature of the system allows you to use its basic components to set up a new construction for every occasion.

Easy to store

Opting for the flexible base for your Floor rack allows you to flatpack the entire construction for simple transport or storage.

Extendable

All the Freedom System setups can be further extended either vertically or horizontally.

⚠ CAUTION

Choose how you want to position (symmetrically or asymmetrically) the Freedom profile in the base. For front-heavy fixtures, it is important that the length profiles are positioned asymmetrically so that the point of gravity of the applied load is in the centre of the Freedom base.

Freedom support base vs flexible base

When selecting a base for your Floor rack, you have two choices: the support base or the flexible base. The flexible base allows you to remove the top screw and fold down the Freedom profiles while they stay attached with the bottom screw, making storage quick and easy. With the support base, the entire construction must be disassembled for storage since the profiles can't be folded. Note that the two bases are not compatible with each other due to their design differences.
