## ENTTEC

Quick Start Manual MANUAL-DATAGATE (Rev A)

## **DATAGATE MK2**

(PN 70044 OR 70045)

#### **Box Contents**

- Datagate Mk2 (pn: 70044 or 70045)
- Straight connect Ethernet lead (pn:79102)
- IEC power cord (country dependent plug)
- This User manual
- CD including NMU (pn:79106)

#### Features

- 8 DMX ports isolated up to 1500V
- Gigabit Ethernet Connection
- LCD display provides network and status information
- DMX refresh rate configurable for each DMX port (1Hz to 44Hz) default is 35Hz.
- Break time/MAB configurable for each DMX port
- All configurations are made through web browser and saved as Profiles.
- Graphical User Interface for creating and editing ports is flow-chart oriented and documents data flow as you configure it.
- OSC support
- Supports numerous protocols for DMX over Ethernet
  - ESP

- Art-Net
- KiNet (input only)
- sACN
- DMX Generator and Stream snapshot feature (web)
- Additional features available by license upgrades
- Available in two models with one license each:
  - 70044 (Ethernet License only)
  - 70045 (Merging License only)

## Additional Features (licenses)

- Stream Auditor: A status monitoring web-screen that includes data throughput statistics, un-matched DMX over Ethernet data streams (streams that are not included in the current profile), and other information for troubleshooting, available through web page
- Merging:
  - HTP
  - LTP
  - A/B Priority
- RDM Tools (GET, SET DMX address, Identify Fixtures ...)
- RDM Sensors on enabled fixtures (temperature, faults, lamp hours ....)
- D-PRO Playback (1 universe only)

for more information visit: www.enttec.com/datagate

## ENTTEC

## Safety

- Do not expose the Datagate Mk2 to rain or moisture, doing this will void the warranty
- Do not remove the cover, there are no serviceable parts inside
- This unit is intended for indoor use only
- Since the Datagate Mk2 is designed to run 24/7, the fan will always remain on, however it can be disabled if needed.

## **Basic Setup**

Right out of the box the unit is setup as Art-Net to DMX (8 universe) node. Because of this, you can use the device with applications, consoles, desks, or controllers that are compatible with Art-Net to distribute Art-Net data via Ethernet network.

With the default profile, each DMX Port is mapped to it's respective Art-Net Universe, allowing you to directly plugin Art-Net without any changes or configuration necessary.

## Getting Started

To begin your installation please follow these steps.

- 1. Unpack the unit from the box. Inspect the Datagate Mk2 for any damage that might have occurred in shipping, and verify that it looks to be in good condition before plugging it in to power.
- 2. The Datagate Mk2 occupies a single unit (1U) in a 19 inch rack. You may attach it to the rack either at this time or later after configuring it, if desired.
- 3. Attach a power cord with mains voltage (supplied) to the IEC input on the back.
- 4. Using an Ethernet Cat5, Cat5E or Cat6 cable, connect the unit to an Ethernet Network.
- Datagate Mk2 is set to DHCP by default, so it can be connected to your existing network (router or switch), and the IP address, if needed, can be changed from LCD or web browser.
- The LCD displays the IP address of the unit at all times (except when it's booting), but if not possible to check the LCD, NMU App (available for Windows & Mac) can be used to detect the Datagate Mk2 on your network. NMU can be downloaded here : <u>www.enttec.com/nmu</u>

## Profiles

Profiles are essential to the operational philosophy of the Datagate. With a profile selected, the device knows how to utilize the many resources it can make use of to perform lighting control tasks.

Each Profile contains configuration information for some or all of the following:

#### DMX Ports

These are the physical DMX ports 1 to 8.

Ethernet Streams

These are the DMX over Ethernet universes. (Art-

Net, ESP, KiNET, ACN)

#### Routing Diagram

The routing diagram is the visual representation of the Profile itself and it tells the Datagate how frames are moved or routed inside the routing engine, as well as what to do with multiple sources of data that need to be merged, when that option is engages. Other special operations can be part of a diagram as well, such as Merging, Channel Shifter, Output Switch, etc.

### **Factory Profiles**

The Datagate Mk2 has a set of factory profiles, to start you off. You're likely to see the following:

- Art-Net to DMX: This profile will take 8 DMX over Ethernet signals using the Art-Net protocol and convert them to 8 DMX signal on ports 1 to 8.
- DMX to Art-Net: This profile takes 8 DMX signals on ports 1 to 8 and send them over Ethernet using Art-Net protocol.
- DMX Splitter: This profile inputs DMX on port 8 and the signal is replicated onto ports 1 to 7
- 4 In 4 Out Isolator: This profiles is used to isolate 4 DMX streams, signal on input 1 is replicated to port 2, signal on port 3 is replicated on port 4
- 7 to 1 Merger: This profile does an HTP merge of DMX inputs 1 to 7 and send the result onto DMX port 8 (merging license needed)

These profiles are just an example of what can be done with the Datagate Mk2, you can modify the factory profiles to accommodate your particular need (copy and then edit), or create your own profile from scratch.

Changing from one profile to another can be done in a web browser window, via RS232 command, or with the touch of a few buttons on the front panel menu

# ENTTEC

for more information visit: <u>www.enttec.com/datagate</u>

### LCD Menu

The LCD Menu is navigated through the four panel buttons on the front of the unit.

The Menu button acts as the "Back" button, which takes you to the previous Menu/screen.

The Enter button goes into the selected option on the screen, and activating the option.

The Top & Bottom button are used to navigate/scroll through the options on any screen. The currently selected option is highlighted with a white background on the screen.

#### Main Menu

Line1: displays the System Name and currently Selected Profile.

Line2: displays either the current IP address / DHCP Failed / disconnected, highlighting the current status of the network interface. The IP address is where the web interface can be accessed.

Line3: displays the amount of packets currently passing through the Datagate Mk2. This number of packets per second, can be used as an indicator of the activity of DMX on your network.

Pressing any of the panel buttons/keys will activate the next screen on the LCD Menu.

#### Selection Menu

1-load profile 2-Setup 3-Status

4-Restart

#### 1-Load Profile

Lists all available profiles on the Datagate Mk2, list can be scrolled using up & down keys. Scrolling indicator is visible when the list allows scrolling.

Pressing Enter at the selected profile will activate the profile (some profiles might need a license to activate)

Setup screen allows changing the IP address of the unit via "Change IP" or doing Factory Reset.

#### Change IP

This screen further gives two options DHCP or Static IP. When Static IP is selected, the screen allows you to change the IP address using the top and bottom button to scroll the digits and the menu & enter buttons to select the segment. Once you are on the last segment of the IP address, pressing the Enter button, will activate the IP address. It will take a few seconds for the change to go through, please wait 30 seconds, before attempting to try again.

> Change IP Address IP: 192.168.001.003

#### Factory Reset

Activating Factory Reset, leads to a simple prompt confirming your action. Once confirmed, the Factory Reset will take a few seconds to run. It will end up deleting all your user created profiles, as well as any saved settings. Please use this only when needed, or as directed by ENTTEC support team.

F-Reset in progress please wait ...

#### 3-Status

Status Screen, allows the following two options:

1-System 2-Network

Both the Status screens are read-only and provide information about the system and Networking.

These require no user-input and serve as a way of checking the performance of the unit.

for more information visit: www.enttec.com/datagate

#### 4-Restart

Restart Screen, when activated, prompts for the user to confirm the selection.

Once confirmed, Datagate Mk2 will stop the engine and restart the system. While rebooting the LCD screen will change between a couple of screens, and the LCD Main Menu will only be visible, once the system is fully ready. (usually takes a minute)

> System Restarting Please wait ...

#### Web Interface

The Datagate Mk2 is configured, controlled and programmed through a web browser interface running on a computer system located on the same Local Area Network. Any modern web browser, such as Chrome, Firefox, Internet Explorer, Safari or Opera, running under any operating system, including Windows XP or Vista, Mac OS X or Linux can be used.

Throughout the Web Interface, helpful hints are displayed when a user hovers the mouse over the "Help" icon ?

ITEC		DATAGATE MK2 - HOME F	AGE
1 2 0	Network Information ?		
	IP Address :	10.10.155 (speed 1 Gb	ps)
	Subnet Mask:	255.0.0.0	
	Broadcast Address:	10.255.255.255	
tiles	Mac Address:	00:D0:69:43:C4:B1	
	Serial No:	2087921	
tings			
Bostoro	System Information ?		
Treatore	System Status:	X Active	Stop Engine

### Web: Profiles

From this screen you can manage your profiles.

As you will notice in the "Remarks" column, the factory default profiles are read only. If you wish to modify one of them, you will first need to copy the profile to some other name. Once the profile has been copied you can modify it to fit your particular needs.

Clicking on the Profile name will launch the profile in the profile-editor window.

DATAGATE MK2 - PROFILES				
Active	ID	Profile Name	Description	Remarks
ی 🍕	001	Art-Net to DMX	8 universe Art-Net to DMX profile	Read-Only
$\bigcirc$	002	7 to 1 Merger 🕜	First 7 DMX Ports Merge to DMX Port 8	Read-Only
$\bigcirc$	003	DMX To Art-Net IZ	8 DMX ports to Art-Net	Read-Only
$\bigcirc$	004	4in 4 out 🕜	Capture 4 DMX inputs, send them out and also send a copy via artnet, used for visualisers	Read-Only
$\bigcirc$	005	DMX Hub ♂	Input 8 Distributed to outputs 1 to 7	Read-Only
$\bigcirc$	006	1-3 DMX Splitter 대	Splits/Isolates 1 port in to 3	Read-Only
$\bigcirc$	007	Splitter with Backup	Splits DMX with a backup using Merge	Read-Only
$\bigcirc$	009	Art-Net to DMX	Art-Net to DMX test	

### Web: Profile Editor

Create a new profile or edit an existing one using the profile-editor. Opens up in a new page in your web browser. Select a module on the left and the right panel will provide help about that panel. Connect a module to another using wires from one point to another.

The direction of the wire (arrow) is important, the arrow signifies output, and reflects the flow of data.

## ENTTEC

### Web: Profile Modules

Each profile is made up of two or more connected Modules or Actions. The relationship between them forms the layout of the data flow within the profile. The following modules are available:

The DMX port represents one of the physical ports on the rear of this unit, select which port you want to use by using the drop down.

- Rate: refresh rate to send DMX (frames per second)
- Break: Break time (micro sec) between each DMX frame (default is 200)
- MAB: Mark After Break time (micro sec) default is 52
- Channels: Number of channels to send in 1 Universe (default is 512)

Limitation: Same DMX port cannot be re-used in the same profile

Art-Net Stream: "Send IP address": is the destination address used when the stream is sending data only.

E	ESP Stream		×
	Universe:	7 🗸	
	Send To:	IP Address : 👻	
	IP:	10.10.110.101	ĭ

ESP Stream: ENTTEC Show protocol DMX over Ethernet stream (ESP). IP address is the destination address used when the stream is sending data only.

Kinet Stream: For example: You can connect Kinet Stream to an Art-Net Stream to convert and output as Art-Net. (Kinet stream is supported as input only)

Streaming ACN: "IP address" is the destination address used when the stream is sending data only (default is disabled = 0.0.0.0)

DMX Generator: Define your own custom DMX Channel values and assign the selected ones.

Snapshot feature can be used to capture values from an input stream. All modifications can be done using the DMX Grid Page.

#### OUTPUT

Merge: HTP or LTP merge operator, drag as many lines to the input node as you wish to merge

- HTP Merge: Higher Takes Precedence The biggest DMX value will be output per channel
- LTP Merge: Latest Takes Precedence The latest
  DMX value will be output per channel

## ENTTEC

for more information visit: www.enttec.com/datagate

Shifter: can be used to shift a number of channels to another spot in the INPUT DMX frame Channels not defined will be left at 0 value

Example: To Shift 100 channels from 10 to 210: Setup as "start listening at": 10 and, "start sending at": 210, "number of channels": 100

Switcher 1-2: Controllabe Switch operator, when the trigger channel (Switch) is greater than the set value, OUTPUT B is output, in other cases OUTPUT A is output.

Must have all input sources and output sources connected

Switcher 2-1: Controllabe Switch operator, acts as a normal Input A to Output Action, but when the trigger value is greater than the set Switch it does Input B to **Output Action** 

Must have all input sources and output sources connected

This OSC module will allow control from an OSC controller on port 8000.

IP address: un-used (reserved for future use)

Make sure the App sends to Datagate's IP address The first 128 DMX channels are mapped to OSC tag: /dgmk2/x where x is the channel (specified as 0-127)

In each OSC message, there is another argument to convey level which is a float between 0 and 255.

Examples:

•/dgmk2/4 220 : sends value 220 on 5th DMX channel •/dgmk2/127 125 : sends value 125 on 128th DMX channel

Limitation: Only one OSC module allowed in the profile

- <b>D=0</b> 30	×
Saved File:	
dmxis_pro.bin	-
Cue List:	
10	-

Use exported D-PRO show files as DMX Source (1 Universe only) This module supports OSC OSC App should send commands to Datagate Mk2 IP address @ port 8000)

#### D-PRO supported OSC tags:

/dpro/gm : for Grand Master

/dpro/cuelist/x/command/go : for GO on cuelist number x /dpro/cuelist/x/command/pause : for stop on cuelist number x

/dpro/cuelist/x/level : for level adjsutment on cuelist number x

Compressor proportinally reduces all channels of the input accroding to the value on the control channel. For example: if control value input is 127 all the values on the input will be reduced to 50% at output

for more information visit: <u>www.enttec.com/datagate</u>

## ENTTEC

#### Firmware Update

You can update the firmware on the Datagate Mk2, via the web browser. Get the new firmware files (they are available on website: <u>www.enttec.com/datagate</u>). Download them to your desktop and then follow instructions in the Datagate Mk2's web browser page, under the Settings section.

Note: While the firmware is being updated, please do not power off the unit, please wait until the web-page is processing. (up-to 5 minutes)

If the web-page does not refresh automatically, please open the home page on the browser manually, and verify that the update has succeeded.

#### NMU

NMU (Node Management Utility) is a free Windows and OSX application that is used to manage compatible ENTTEC DMX over Ethernet nodes. NMU will not directly allow you to configure the Datagate Mk2 itself, but it can help you find your unit's IP address and then open a browser window to make the required changes.

To employ the NMU, follow this set of instructions:

1. If you have not already done so, download and install the application from

#### www.enttec.com/nmu

- 2. Ensure that your Datagate Mk2 is hooked up physically by Ethernet cable to the same physical network as the computer on which you will run the NMU.
- 3. Start the application.
- 4. Press the Discovery button.
- 5. Select Datagate Mk2.
- 6. An IP Address will be shown next to any Storm24 which are located.

## Art-Net Send Test

NMU can also be used to troubleshoot the DMX output on your Datagate Mk2. Art-Net Test can be accessed from the top menu: Artnet  $\rightarrow$  Artnet Test.

When first opened, the Art-Net is set to Disabled, please set it to Enabled, and then you can use either the DMX faders to test one or more DMX channels, or use the test-patterns from the options available.

The Datagate MK2 should be set to Art-net to DMX profile

#### Connector pin out 5pin DMX OUT/ DMX IN:

- Pin 1: Ground
- Pin 2: Data -
- Pin 3: Data +
- Pin 4: NC
- Pin 5: NC

#### RS232:

- Pin 2: TX
- Pin 3: RX
- Pin 5: Ground

#### Specifications

Due to continuous improvements and innovations of all ENTTEC products, specifications and features are subject to change without notice.

Item	Value
Input Voltage	90 – 260V AC
Input Frequency	50/60Hz
Weight	3.96lbs / 1.8kg
Shipped weight	5.78 lbs / 2.6kg
Length	18.25" / 463.1mm
Width	5″ / 111mm
Height	1.72″ / 43.6mm
Op Environment	0°-50°C
Connectors	8x 5-Pin Female RDM enabled XLR for DMX output/input 1x 5-Pin male XLR for DMX input 1x RJ45 ethernet connector 1x RS232 connector 2x USB host connector (un-used)
Certification	CE, FCC certified

## Ordering Information

ODE and related products can be ordered from our website or through your ENTTEC dealer using the following part numbers.

Part Number	Description
70044	Datagate Mk2 (Ethernet only)
70045	Datagate Mk2 (Merging only)
70701	Merging License
70702	RDM Tools License
70703	RDM Sensor Monitor License
70704	Stream Auditor License
70705	Hot Spare License
70707	D-Pro Playback Engine
