General description & specifications

The BS-15 is a compact, two-way passive cabinet. Consists of a 15" (3" voice coil) LF transducer and a 1" HF driver mounted on a 90° x 60° rotatable horn offering a wide range of applications from fixed installations, frontfill and as a stage monitor.

The 15" driver offers high power handling and high sensitivity with low harmonic distortion and linear response. The cone is waterproof and has been treated on both sides. The ultra compact 1" HF driver achieves high sensitivity, with exceptional dynamic range creating remarkable depth and definition.

The cabinet can be complemented by the BS-112 or BS-118 subwoofers and offers tremendous sound and clarity over medium distances. Although the BS-15 can be used without processor we recommend that the cabinet presets are applied for maximum optimization and performance.

Note:

The preset is made with an amplifier from the RS series and an ARK processor. Using other products will not guarantee the same result and if the preset is incorrectly introduced it can affect the performance of the system and the reliability of the speaker.

Ensure the impedance of the loudspeaker and the maximum AES power is capable of supporting when adjusting the power limitation in the amplifier.

This can also lead to loss of warranty claims in case of damage.
